Berenberg Multi Asset Balanced R A

Actively managed multi asset fund

Investment Strategy

The Berenberg Multi Asset Balanced is a balanced asset-managing fund comprised of stocks, bonds, alternative investments and liquidity. The asset allocation is actively managed depending on the relative attractiveness of each asset class. The Fund invests worldwide with a regional focus on Europe. The share of equity securities consists of single stocks, actively managed mutual funds and passive Exchange Traded Funds (ETFs) and is limited to 65% of the portfolio. The bond segment mainly invests in European securities with an investment grade ratings and a medium duration. Apart from government bonds and covered bonds, the fund also diversifies in corporate and financial bonds. Active approach, i.e. index weights have no influence on individual stock selection.

Fund management comment

In April, global risk assets recovered significantly, although the market environment remained marked by high geopolitical uncertainty. Toward the end of the month, oil prices rose sharply due to increasing tensions between the United States and Iran. However, a very positive earnings season, particularly among technology stocks, provided overall support for equity markets. In this environment, emerging market equities gained 12.9%, benefiting from their high technology weighting, while developed markets also posted gains: Europe advanced 5.4%, and the S&P 500 rose 8.8% (in EUR terms). Within the portfolio, we increased the weighting of AI-related positions through the purchase of Eaton and an increased allocation to the Nasdaq, while reducing exposure to sectors with weakening momentum, particularly luxury goods (sale of LVMH) and healthcare (reduction of Roche, sale of Boston). At the same time, the global economy showed initial signs of slowing, with European economic data in particular disappointing on the downside. Government bond markets also experienced volatility in line with the broader market environment. Yields on 10-year German government bonds ended the month around 3 basis points higher. The recovery in risk assets at the beginning of the month was also reflected in the corporate bond market, where credit spreads on European investment-grade bonds tightened by 15 basis points. Gold benefited little from intermittent hopes of easing tensions in the Middle East and declined by 1.1% over the month.

Opportunities:

- Long-term asset growth through price gains, dividends, and interest income.
- Stabilization of assets during negative capital market phases through professional risk management and intelligent diversification.
- Improvement of the risk/return profile through active management across various asset classes.
- Growth stocks and specific sectors, countries, or market segments may outperform the market in certain phases.

Risks

- The share value may fall below the purchase price. Significant fluctuations in value and price losses are possible over longer periods and in single years due to the use of equities and derivatives.
- Currency losses due to exchange rate fluctuations are possible for investments in foreign currencies.
- There is no guarantee of success for individual stock analysis and active management.
- The strategy may temporarily concentrate its investments to a greater or lesser extent in certain sectors, countries, or market segments. This may also involve risks.

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 5.50. issue surcharge of 5.50 he has to pay EUR 55.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.

SFDR: SFDR is short for "Sustainable Finance Disclosure Regulation". Under the SFDR, financial products must disclose information on how sustainability is taken into account, with the disclosure requirements varying depending on the type of consideration (Article 6, Article 8 or Article 9 SFDR).
