# Berenberg Euro Bonds R A

Actively managed fixed income fund

## Investment Strategy

The Berenberg Euro Bonds consists primarily of fixed and floating rate bonds from investment-grade issuers. The portfolio management invests worldwide with a focus on Europe. In addition to government bonds and covered bonds, investments are also made in corporate and financial bonds. The investment ratio depends on the relative attractiveness of the bond segments, but should be at least 80%. As a rule, there is an active duration management. Active approach, i.e. index weights have no influence on individual stock selection.

## Fund management comment

May was once again marked by the ongoing war in Iran and high energy prices. In light of the shifting inflation dynamics, the European Commission lowered its growth forecast for the eurozone in 2026 to +0.9%. At the same time, several members of the ECB Governing Council signaled that a rate hike in June was inevitable. Additionally, concerns about further fiscal stimulus in the UK weighed on bond markets. The ruling Labour Party suffered losses in the local elections in England, and Prime Minister Keir Starmer's leadership was called into question. The yield on 10 year German government bonds subsequently rose to 3.2% in line with UK gilts, but recovered toward the end of the month and stood at 2.94% at the end of May. Euro-denominated corporate bonds remained unfazed once again, and spreads in the investment grade (-3 bps) and high yield (-12 bps) segments fell once more.

**Opportunities:**

- Asset preservation, primarily achieved through interest income
- Stabilization of assets in negative capital market phases through professional risk management and intelligent diversification
- Improvement of the risk/return profile through active management across all bond segments

**Risks**

- Fluctuations in value due to interest rate risks
- Price losses possible in individual stock market years
- Currency losses due to exchange rate fluctuations
- Limited participation in positive performance of individual bond segments due to broad diversification and negative selection effects in individual security and fund selection

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

Returns on investments in foreign currencies may increase or decrease due to currency fluctuations. The purchase, holding, conversion or sale of a financial instrument, as well as the use or termination of an investment service, may give rise to costs that affect the expected income. In the case of investment funds, you should always make an investment decision on the basis of the sales documents (key information document, presentation of past performance, sales prospectus, current annual, if applicable, semi-annual report), which contain detailed information on the opportunities and risks of the relevant fund. An investment decision should be based on all characteristics of the fund and not just on the sustainability-related aspects. Sustainability related disclosures can be found at [www.berenberg.de/en/esg-investments](http://www.berenberg.de/en/esg-investments). In the case of securities for which a securities prospectus is available, investment decisions should always be made on the basis of the securities prospectus, which contains detailed information on the opportunities and risks of this financial instrument, otherwise at least on the basis of the product information document. A fund investment involves the purchase of shares in an investment fund, but not a specific underlying asset (e.g. shares in a company) held by that fund. The fund is subject to increased volatility as a result of its composition/the techniques used by Fund management; therefore, unit prices may increase or decrease significantly within short periods of time. **BVI method:** The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 2.00. issue surcharge of 2.00 he has to pay EUR 20.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.

**SFDR:** SFDR is short for "Sustainable Finance Disclosure Regulation". Under the SFDR, financial products must disclose information on how sustainability is taken into account, with the disclosure requirements varying depending on the type of consideration (Article 6, Article 8 or Article 9 SFDR).
