Investment Strategy

The Fund's investment objective is to achieve long-term capital growth that outperforms the benchmark over a medium to long-term period. The main driver for this is the above-average profit growth of the selected companies. The strategy is based on a disciplined bottom-up stock selection of attractive small and mid caps within the German-speaking area. The established niche companies have strong market positions with their focused business models in their home markets and globally. They offer sustainable and above-average growth with high profitability and are often owner-managed. Decisive criteria are end markets with structural growth, high entry barriers and excellent management teams.

- Growth-oriented fund
- Concentrated portfolio of 25-45 stocks
- Mid-cap approach; investment opportunities also in the small and micro-cap range
- Long-term investment horizon and low portfolio turnover
- Active approach, i.e. index weights have no influence on individual stock selection

Fund management comment

In July, the German stock market was marked by a mixed reporting season, which was characterized by historically high price fluctuations. The Berenberg Aktien Mittelstand fund was unable to beat its benchmark. Jungheinrich's profit warning took the market by surprise and its share price fell sharply. Atoss Software presented quarterly figures that were in line with expectations. Nevertheless, the share lost ground significantly, driven by macroeconomic headwinds in new business and growth investments that could weigh on margins. SUSS issued a profit warning for its margin targets, which weighed on the share. A noticeable improvement in business development at Norma and analyst comments on the increase in profitability compared to the previous quarter led to a significant recovery. United Internet continued its positive performance from the previous quarter. A strong Q1 update with solid progress in project development and new building permits had a positive impact on Energiekontor's share price. We increased our holdings in SUSS, Redcare, and ATOSS and reduced our holdings in Elmos, Befesa, Dürr, and Evotec.

Consideration of ESG Elements

Identifying companies and business models that will be successful in the long term is the basis for good investment decisions. Environmental, Social and Governance (ESG) factors are key factors in decision making and are therefore integral components of the investment process.

CO2 Intensity

The fund does not actively manage its carbon footprint, however, emissions data such as CO2 intensity are relevant parameters which can be used to assess the efficient management of a company and the extent of transition risks.

ESG Score

The data provider MSCI ESG uses an ESG score of 0 to 10 to assess the management of material ESG risks of portfolio holdings compared to competitors.

ESG Controversies Screen

Investments in the fund are monitored for ESG controversies and, with the help of MSCI ESG data, flagged according to their severity. Thereby, potential ESG risks of investments are identified. In the case of an orange flag (severe controversy), we enter into an active exchange with the company. In the case of a red flag (very severe controversy), the company is excluded.

Benchmark composition for ESG metrics: 50% MDAX, 50% SDAX

Portfolio as of 31 Jul 2025. Source: MSCI ESG, own calculations and presentation. Certain information © 2023 MSCI ESG Research LLC. Reproduced by permission. Data coverage for fund and benchmark: graph "CO2-Intensity" (93.70%/94.85%), graph "ESG Score" (92.91%/94.85%). Liquidity and securities which are not covered by MSCI ESG are excluded from the calculation of the ESG metrics for the fund as well as the benchmark. The weights of the remaining fund and benchmark components are normalised to 100%.

Glossary & Methodology

Active Ownership

The term "Active Ownership" encompasses all our activities where we, as an investor, attempt to positively influence a company's management of ESG aspects. This includes Engagement, i.e. direct dialogue with companies to discuss specific ESG objectives as well as proxy voting, i.e. our voting recommendations to our fund administrator, which then exercises the voting rights at general meetings.

CO2 Intensity

The CO2 Intensity (Scope 1 & 2 emissions) per company is multiplied by its portfolio weight (current value of the investment by current portfolio value) and summed up. This weighted average CO2 Intensity provides an indication of the portfolio's exposure to CO2-emission intensive companies.

ESG Score

Using a score between 0 (lowest) and 10 (highest), MSCI ESG assesses the ability of portfolio holdings to identify and manage environmental, social and governance-related risks compared to peers. The ESG scores are assigned at the holding level and are aggregated at the portfolio level as the weighted average ESG Score.

ESG Controversies Screen

MSCI ESG analyses controversial business practices from the five areas environment, human rights, labour rights & supply management, customers and governance. The controversies are rated according to their reputational risk as well as the operational handling by a flagging system. Green indicates no or weak controversies, yellow indicates moderate controversies, orange indicates severe controversies and red indicates very severe controversies.

Opportunities:

- High return potential of stocks over the long term
- Development of growth stocks occasionally above average
- Development of small cap stocks above average in certain phases
- Possible additional earnings through individual value analysis and active management

Risks

- High susceptibility of shares to fluctuation, price losses possible
- Share value may fall below the purchase price at which the customer acquired the share
- Below-average development of growth stocks possible at times
- Below-average development of small cap stocks possible at times
- No guarantee of success for individual value analysis and active management
- Concentration risk through focusing on investments in one single country
- Risks resulting from the use of futures

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. As no issue surcharge is incurred for this share class the gross performance corresponds to the net performance. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
