# Berenberg Multi Asset Defensive R D

Actively managed multi asset fund

## Investment Strategy

The Berenberg Multi Asset Defensive is an asset-managing fund with a total return approach\* and invests in stocks, bonds, alternative investments and liquidity. Based on several indicators (macroeconomic, fundamental, technical) the investment ratio, the duration as well as the regional and sector allocation are managed. The share of equities is limited to 50% of the portfolio. The fund invests in single stocks, actively managed funds as well as passive Exchange Traded Funds (ETFs). A specific attention is given to a systematic risk management. \*The funds total return approach objective is a long-term capital appreciation (investment horizon at least 3 years) while pursuing a systematic limitation of the risk of loss. Active approach, i.e. index weights have no influence on individual stock selection.

## Fund management comment

Risk assets continued their upward momentum in May, largely driven by the US-Iran conflict. Escalation fears in the middle of the month pushed oil prices, yields, and the USD higher, while hopes for a ceasefire towards month-end supported risk appetite. US equities once again outperformed European stocks, supported by continued AI enthusiasm and positive earnings prospects in the technology sector: the S&P 500 rose by 5.3% (USD), while the MSCI Europe gained 3.3%. Within the portfolio, Nvidia was newly added and the position in Banco Santander was increased. Profits were also realized in TotalEnergies. Hannover Re and Meta were sold for risk management reasons. In bond markets, US Treasury yields rose across the entire yield curve, with more hawkish signals from the US Federal Reserve particularly supporting the increase in yields. In Europe, however, yields declined, with 10-year German Bunds ending the month around 10 basis points (bps) lower. The recovery in risk assets was also reflected in the corporate bond market, where credit spreads on European investment-grade bonds narrowed by 2 bps and those on high-yield bonds by 7 bps. Despite ongoing geopolitical uncertainty, gold failed to benefit from its traditional safe-haven role and recorded a decline of 1.7% over the course of the month.

**Opportunities:**

- Attractive return potential over the medium to long term
- Above-average performance by exploiting investment opportunities across regions and asset classes, with a focus on intelligent diversification
- Stabilization of assets in negative capital market phases through professional risk controlling
- Possible additional returns through active management

**Risks**

- Volatility of equities, bonds and currencies can lead to price losses
- Unit value may fall below the purchase price at which the customer acquired the unit
- No guarantee of success through active management
- Derivative transactions: Increased opportunities are accompanied by increased risks of loss. Furthermore, the fund's profit opportunities may also be reduced by hedging against losses using derivatives

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

**BVI method:** The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 5.50. issue surcharge of 5.50 he has to pay EUR 55.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.

**SFDR:** SFDR is short for "Sustainable Finance Disclosure Regulation". Under the SFDR, financial products must disclose information on how sustainability is taken into account, with the disclosure requirements varying depending on the type of consideration (Article 6, Article 8 or Article 9 SFDR).
