# Berenberg Multi Asset Defensive R A

Actively managed multi asset fund

## Investment Strategy

The Berenberg Multi Asset Defensive is an asset-managing fund with a total return approach\* and invests in stocks, bonds, alternative investments and liquidity. Based on several indicators (macroeconomic, fundamental, technical) the investment ratio, the duration as well as the regional and sector allocation are managed. The share of equities is limited to 50% of the portfolio. The fund invests in single stocks, actively managed funds as well as passive Exchange Traded Funds (ETFs). A specific attention is given to a systematic risk management. \*The funds total return approach objective is a long-term capital appreciation (investment horizon at least 3 years) while pursuing a systematic limitation of the risk of loss. Active approach, i.e. index weights have no influence on individual stock selection.

## Fund management comment

In July, U.S. policy—both trade and fiscal—continued to play a key role in shaping market activity. New trade agreements, including with the EU and Japan, another fiscal package, and a strong U.S. earnings season provided positive momentum: the S&P 500 gained 2.2%, and the Nasdaq rose by 2.4% in USD, driven by continued strength in the technology sector. In Europe, the increase was more moderate, with the Stoxx Europe 50 up by 0.4%. Within the portfolio, the position in London Stock Exchange was reduced. In addition, the position in industrial gases producer Linde was increased, and the defensive North American waste management company Waste Connections was sold. U.S. economic data remained mixed in light of trade policy uncertainties. Yields rose on both sides of the Atlantic—10-year U.S. Treasuries by 15 basis points and German Bunds by 9 basis points. Risk appetite increased, as reflected in narrower spreads on European corporate bonds (–13 basis points). The gold price declined slightly over the course of the month, falling by 0.4%.

Opportunities:

- Attractive return potential over the medium to long term
- Above-average performance by exploiting investment opportunities across regions and asset classes, with a focus on intelligent diversification
- Stabilization of assets in negative capital market phases through professional risk controlling
- Possible additional returns through active management

Risks

- Volatility of equities, bonds and currencies can lead to price losses
- Unit value may fall below the purchase price at which the customer acquired the unit
- No guarantee of success through active management
- Derivative transactions: Increased opportunities are accompanied by increased risks of loss. Furthermore, the fund's profit opportunities may also be reduced by hedging against losses using derivatives

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

Returns on investments in foreign currencies may increase or decrease due to currency fluctuations. The purchase, holding, conversion or sale of a financial instrument, as well as the use or termination of an investment service, may give rise to costs that affect the expected income. In the case of investment funds, you should always make an investment decision on the basis of the sales documents (key information document, presentation of past performance, sales prospectus, current annual, if applicable, semi-annual report), which contain detailed information on the opportunities and risks of the relevant fund. An investment decision should be based on all characteristics of the fund and not just on the sustainability-related aspects. Sustainability related disclosures can be found at [www.berenberg.de/en/esg-investments](http://www.berenberg.de/en/esg-investments). In the case of securities for which a securities prospectus is available, investment decisions should always be made on the basis of the securities prospectus, which contains detailed information on the opportunities and risks of this financial instrument, otherwise at least on the basis of the product information document. A fund investment involves the purchase of shares in an investment fund, but not a specific underlying asset (e.g. shares in a company) held by that fund. The fund is subject to increased volatility as a result of its composition/the techniques used by Fund management; therefore, unit prices may increase or decrease significantly within short periods of time. **BVI method:** The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 5.50. issue surcharge of 5.50 he has to pay EUR 55.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.
