Berenberg Guardian R A

Actively managed multi-asset fund

Investment Strategy

The Berenberg Guardian is an actively managed absolute return fund. It is aimed at investors seeking return opportunities through interest income, hedging and tactical opportunities, particularly in falling markets. In this way, the fund aims to help investors diversify their equity investments.

The fund combines fundamental and macroeconomic analysis with quantitative models in a discretionary investment approach. The strategy aims to deliver positive returns with low drawdowns and volatility over 12-month periods, a negative correlation to falling equity markets and a low correlation to "normal" equity markets. These objectives meet the needs of investors seeking steady returns, protection during market downturns and the potential for gains when opportunities arise.

Fund management comment

Although the Strait of Hormuz remained closed and there is still no serious peace plan between the U.S. and Iran, global stock markets experienced a recovery rally of historic magnitude, including new all-time highs. The S&P 500 gained more than 10%, the Euro Stoxx 50 more than 7%, and the technology-heavy KOSPI posted a gain of a whopping 34%. Realized 20-day volatility fell from around 20% to below 12% in the wake of the rally. Particularly telling, however, was the positive spot-volatility correlation. On positive days, the S&P 500 gained on average 2.5 times more than it lost on negative days. Implied volatility also returned to pre-war levels—the VIX ended the month at approximately 17 points. Although the Berenberg Guardian preserved a large portion of the open option premiums during the escalation in the Middle East, it still lost about 0.66% in April due to the unprecedented recovery. New hedges were put in place several times a week in accordance with the specified budget, so that protection is already taking effect with drawdowns of 3–5%, despite the recent rally.

Opportunities:

- Attractive return potential over the medium to long term
- Above-average performance by exploiting investment opportunities across regions and asset classes, with a focus on attractive market segments and structural investment themes
- Potential for additional returns through active and opportunistic management

Risks

- High volatility of shares, riskier bonds and currencies, price losses possible
- Unit value can fall below the purchase price at which the client acquired the unit
- No guarantee of success due to active and opportunistic management
- The conclusion of index and currency futures for quota control can increase the risk of loss, at least temporarily

Further details on the opportunities and risks of this fund can be found in the sales prospectus.

BVI method: The charts and tables regarding performance shown here are based on own calculations according to the method developed by the German Investment Funds Association (BVI). They illustrate past performance. Future performance can deviate both positively and negatively from these calculations. Gross performance (BVI method) takes into account all charges at fund level (e.g. management fee), net performance plus the issue surcharge. Additional charges can arise for individual investors (e.g. custody account fees, commissions and other fees). Model calculation (net): An investor wants to purchase fund units for EUR 1,000 Euro. Considering a max 3.00. issue surcharge of 3.00 he has to pay EUR 30.00 Euro for the purchase. Also, fees may be charged for the administration of the safe custody account, which will lower the performance. Past performance is not a reliable indicator of future performance.

SFDR: SFDR is short for "Sustainable Finance Disclosure Regulation". Under the SFDR, financial products must disclose information on how sustainability is taken into account, with the disclosure requirements varying depending on the type of consideration (Article 6, Article 8 or Article 9 SFDR).
