

SOFT US DURABLE GOODS ORDERS OFFSET BY RISING SHIPMENTS

U.S. durable goods orders for January were a bit soft, with orders declining from December but shipments continuing to rise. This is a natural correction following months of increases and is not a concern, in our view. A large 28% decline in the always volatile nondefense aircraft orders contributed to a 3.7% m/m decline in **durable goods orders, more than offsetting December's 2.6% monthly rise, while goods orders excluding transportation receded 0.3% following six consecutive monthly gains, a natural correction that is not too concerning*

**Durable goods shipments increased 0.2% m/m and shipments of nondefense capital goods excluding aircraft (core) that are closely correlated with business equipment investment in GDP advanced slightly, 0.1% m/m; they have increased for 12 straight months - the longest increasing run in the 26-year history of the series - and are up 11% yr/yr (Chart 1)*

**The sustained gains in core durable goods shipments reflect the robust factory momentum buildup from higher energy prices, positive business responses to the pro-business regulatory environment, tax cuts and stronger global demand.*

The categories of durable goods shipments that have increased the most over the last year are consistent with the increased cyclical demand in the global industrial sector: primary metals: +13% yr/yr, fabricated metals: +11% yr/yr, and machinery: +12% yr/yr. Shipments of defense capital have turned up since late 2016 and will benefit significantly from the \$165bn increase in budget authority for defense and national security spending in fiscal years 2018 and 2019.

Core durable goods orders that serve as a fairly reliable benchmark for underlying manufacturing demand have now declined for two consecutive months. Even so, on a yr/yr basis, core orders are up a robust 8%, one of its strongest growth rates in 5.5 years. This indicator of strong product demand indicates that firms will have to keep factories operating at a high rate and maintain a robust pace of hiring (Chart 2). Key regional manufacturing surveys released for February suggest that businesses have looked past the financial market volatility and maintained elevated future capex plans because of the strong underlying fundamentals (Chart 3).

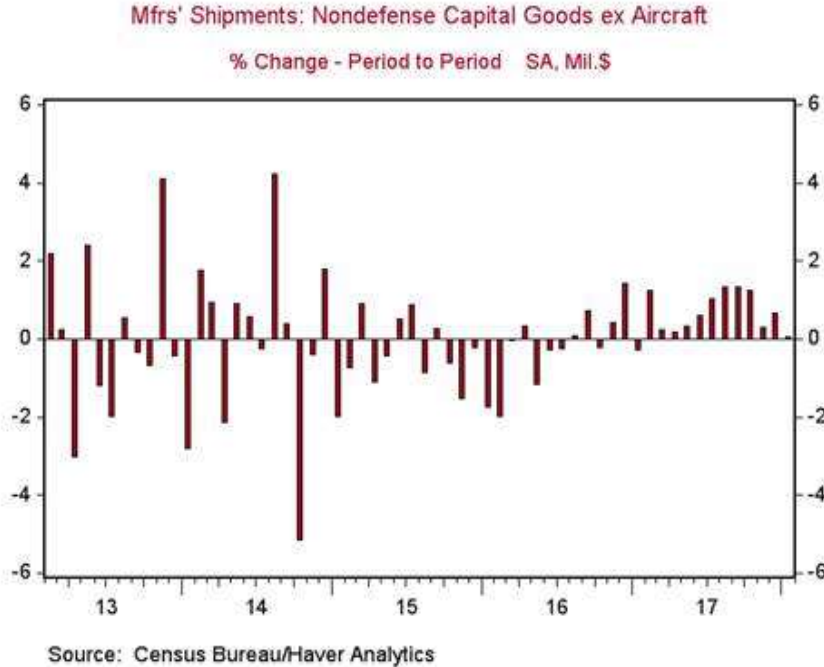

Manufacturers continued to increase inventories at a moderate pace. The durable goods inventory-shipments ratio is near recent lows, another indication that firms will have to keep ramping up production to meet demand (Chart 4).

Higher production costs are a key potential headwind facing industrial businesses this year. Prices of commodities and industrial materials have risen and there are building price pressures in the supply chain pipeline and higher labor costs: (1) Manufacturing surveys indicate that firms are paying more for inputs and charging higher prices for their goods, (2) the producer price index started to pick up in late 2017, (3) higher import prices for capital goods will feed through to businesses with some lag, and (4) the surge in the Dallas Fed manufacturing survey suggests that more firms have increased worker compensation in recent months (Chart 5).

We expect that upward production cost pressures in industry will be partially mitigated by increases in productivity, and that the stronger product demand will provide flexibility to businesses to raise their product prices and maintain margins.
